

Hearing Aid Dispenser Interview Questions

1. How often do you stay up to date on current literature, talk with colleagues, and participate in professional organizations or conferences to keep abreast of developments in audiology?

2. Walk me through how you would assist audiologists in performing aural procedures such as real ear measurements, speech audiometry, auditory brainstem responses, electronystagmography, and cochlear implant mapping.

3. What kind of experience do you have performing basic screening procedures such as pure tone screening, otoacoustic screening, immittance screening, and screening of ear canal status using otoscope?

4. What is the most challenging part of diagnosing and treating hearing or related disabilities under the direction of an audiologist?

5. Describe an experience when you demonstrated assistive listening devices (ALDs) to clients.

6. Share your approach to create or modify impressions for earmolds and hearing aid shells.

7. Name a time when you trained clients to use hearing aids or other augmentative communication devices.

8. Describe an effective method to administer basic hearing tests including air conduction, bone conduction, or speech audiometry tests.

9. Tell me how you select and administer tests to evaluate hearing or related disabilities.
