

Remedial Project Manager Interview Questions

1. Tell me about effective plans you developed and/or implemented for the sustainable regeneration of a brownfield site. How did you ensure regeneration of a wider area?

2. How do you ensure safety, quality, and compliance with standards/requirements when planning and implementing brownfield redevelopment projects? Share an experience.

3. Describe how you develop or implement plans for revegetation of brownfield sites.

4. Share an experience in which you successfully conducted feasibility and/or cost-benefit studies for environmental remediation projects.

5. What factors do you consider when reviewing and evaluating environmental remediation project proposals?

6. What is the state of your records of decisions, actions, and progress of environmental redevelopment projects? What is something you would like to improve?

7. Share an experience in which you effectively designed and/or implemented plans for structural demolition, debris removal, water remediation, and/or revegetation of brownfield sites.

8. What factors do you consider when you inspect sites to assess environmental damage or monitor cleanup progress?

9. Provide your experience identifying environmental contamination sources.

10. Provide an experience in which you effectively designed and/or implemented measures to improve the water, air, and/or soil quality of a contaminated site.
