

## Professor Interview Questions

1. Tell me about an experience in which you analyzed information and evaluated results to choose the best solution to a problem.

2. Share an effective approach to working with a large amount of information/data. How has your approach affected your company?

3. What is your background in conducting research on the structures and properties of materials, such as metals, alloys, polymers, and ceramics, to obtain information that could be used to develop new products or enhance existing ones?

4. Describe methods you have found effective when planning laboratory experiments to confirm feasibility of processes and techniques used in the production of materials having special characteristics.

5. What factors do you consider when determining ways to strengthen or combine materials or develop new materials with new or specific properties for use in a variety of products and applications?

6. Tell me how you organize, plan, and prioritize your work.

7. Share an experience when you applied new technology or information in your job. How did it help your company?

8. Give me an example of when you thought outside of the box. How did it help your employer?

9. Would you consider analyzing data or information a strength? How so?

10. Share an example of a time you had to gather information from multiple sources. How did you determine which information was relevant?
