

## Radio Technician Interview Questions

1. Describe a time when you successfully serviced, repaired, calibrated, or tested a device that operates mainly by electronic principles.

2. Describe methods you have found effective to inspect and test electrical systems and equipment to locate and diagnose malfunctions, using visual inspections, testing devices, and computer software.

3. Walk me through how you adjust, repair, or replace defective wiring and relays in ignition, lighting, air-conditioning, and safety control systems, using electrician's tools.

4. Share an experience in which you successfully shared a difficult piece of information. (Make sure that the candidate has open lines of communication.)

5. Tell me about a recent experience you've had working with your hands.

6. Share an experience when you applied new technology or information in your job. How did it help your company?

7. Tell me about the last time you monitored or reviewed information and detected a problem. How did you respond?

8. Share an example of a time you had to gather information from multiple sources. How did you determine which information was relevant?

9. What is the most challenging part of estimating costs of repairs based on parts and labor requirements?

10. Share an effective approach to working with a large amount of information/data. How has your approach affected your company?

11. Share an experience you had in dealing with a difficult person and how you handled the situation.

12. Would you consider analyzing data or information a strength? How so?

13. Share an experience in which your diligence of inspecting equipment, structures, or materials helped you identify a problem or the cause of a problem.

## Radio Technician Interview Questions
